MATHS & ENGLISH

Information for learners, parents/carers and referral professionals

Maths & English at your level

Maths and English are included where required and are tailored to each learner's starting point and individual needs. Our approach is practical, supportive and focused on progression.

What happens at enrolment?

We review each learner individually. We will look at previous maths and English qualifications and identify the most appropriate pathway for their starting point and support needs.

- We check previous GCSE, Functional Skills or other relevant results.
- We identify the learner's current starting point and support needs.
- We agree the most appropriate maths and English pathway.
- Where required, this may include GCSE, Functional Skills or an approved Entry Level/Level 1 qualification.

A flexible approach for EHCP learners

Having an EHCP does not automatically mean a learner is exempt from maths and English. Where appropriate, learning can be adapted to the individual and may include small-group teaching, practical activities, visual support, repetition, additional processing time and embedded learning.

Maths & English in real life

MATHS

Money and change
Budgeting
Measurements and quantities
Stock counting
Time and timetables
Everyday problem solving

ENGLISH

Communication
Reading instructions
CVs and emails
Interview skills
Customer service
Product descriptions and content

Our aim

We want learners to build confidence with maths and English while developing skills they can use in everyday life, further education, training and employment. Practical activities can support learning, but they do not replace an approved maths or English qualification where one is required.

Every learner is different.

The maths and English pathway will be discussed with the learner and parent/carer or referring professional as part of enrolment and support planning.
